SUMMARY

CS new grad (UCSC, 3.8 GPA) with production experience across backend systems, full-stack engineering, and AI-powered applications. I take problems from ambiguity to production, designing systems that eliminate friction, scale reliably, and ship fast.

EDUCATION

Bachelor of Science in Computer Science

University of California, Santa Cruz

September 2022 – June 2026 (Expected)

- GPA: **3.8 / 4.0** | Dean's List 2022 – 2026
- Relevant coursework: Algorithms & Data Structures, Distributed Systems, Machine Learning, Database Systems, Software Engineering, Operating Systems, Computer Architecture, Full-Stack Engineering

SKILLS

Languages: Python, TypeScript, Go, Java, C, C++, JavaScript, Dart

Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI, Flask, SpringBoot, Flutter, Angular

Backend & Systems: REST APIs, GraphQL, WebSockets, Microservices, Distributed Systems

AI / ML: LLMs, MCP, RAG, Embeddings, NLP, ML Pipelines, Scikit-learn

Databases: PostgreSQL, MySQL, Supabase, Vector Databases, Prisma, SQLAlchemy

Cloud & DevOps: AWS (Lambda, S3), Azure, GCP, Docker, Nginx, CI/CD, GitHub Actions, Cloudflare Workers

EXPERIENCE

Data/AI Applications Engineer | AICG

January 2026 – Present | Remote

- **Optimized developer workflows for 700+ users** by shipping a production **Node.js** open-source **SQL formatter** with a **VS Code** extension, eliminating manual code standardization overhead across engineering teams.
- Owned full client engagement for an enterprise AI embeddings search system over **1,000+** HR documents, from requirements and iterative QA through production deployment on client infrastructure, connecting a **Python** indexing backend with a **Next.js** frontend.
- **Transformed retail data accessibility** by engineering DLH Unitops AI, a production full-stack **RAG** dashboard with natural language querying, built on a **microservices** backend and **React** UI.
- **Enabled scalable execution across 5+ data warehouses** by architecting a modular DBTX editor, coupling a **FastAPI** and **Supabase** microservices backend with a **React Flow** UI to deliver dynamic DAG visualization and multi-SCM Git versioning for seamless integration into the core DLH platform.

Developer Intern | AICG

July – September 2025 | Remote

- **Reduced compute costs by 30%** by developing an asynchronous **AWS Lambda** backend and custom **React** video editor UI for footage.ai, optimizing the integration of generative AI models.
- **Increased data availability** by engineering config-driven ELT pipelines using **Python** and **AWS**, automating real-time ingestion and heavily reducing manual backend integration bottlenecks.

Software Engineering Intern | Nyantras LLC

July – September 2023 | Remote

- **Scaled automated candidate assessments to 100% of applicants** by architecting a **Java** and **REST API** backend for plagiarism detection, seamlessly integrated into the Applicant Tracking System UI.
- Accelerated cross-team handoffs by authoring functional specifications and design documentation for new full-stack modules, establishing a reusable standard adopted across multiple engineering teams.

PROJECTS

Nexus AI (Multi-Platform AI Productivity Hub) | [GitHub](#)

April 2026 – Present

- Built a multi-platform AI productivity hub integrating voice (Discord, Zoom, Slack, Teams) with a pluggable **Node.js** adapter architecture, delivering per-speaker call intelligence and productivity analytics across **5+** platforms for engineering teams.

Atropos (Microservice Fault Testing Toolkit) | [GitHub](#)

January 2026 – May 2026

- **Reduced microservice debugging cycles** by building a **Go-based** chaos engineering SDK with a **Next.js** dashboard for real-time fault injection and latency isolation across distributed systems.

Copark (Parking Management Portal) | [GitHub](#)

April 2025 – June 2025

- **Scaled to 1,000+ active permits** by architecting a full-stack parking portal with **REST & GraphQL APIs** on **AWS**, backed by a dockerized **Node.js** microservices layer and **PostgreSQL** database.

EnrollSmart (Course Tracker) | [GitHub](#)

December 2024 – April 2025

- **Reduced manual course checking by 50%** for 100+ UCSC courses by engineering a **Next.js & Flask** application with automated **PostgreSQL** seat tracking and real-time push notifications.

AI-Generated Text Detection System | [GitHub](#)

November 2024 – December 2024

- **Achieved 90% detection accuracy** by building an end-to-end supervised ML pipeline using **Python & Scikit-learn**, deployed as a web interface for instant AI-generated text classification.

Home Automation System | [Website](#)

May 2023

- **Shipped a production IoT app** to the Google Play Store using **Flutter, ESP32, MQTT, and Matter**, enabling low-latency device control with IFTTT-style automation workflows.
